Project Title	Emerging Methods for Early Detection of Forest Fires
Maximum Mark	2 marks

D 11 4 4 4()	A laws destructive fire that arread even a favort arrange of
Problem statement(ps):	A Large destructive fire that spread over a forest or area of
	woodland is a Forest fire that causes loss of humungous amount
	of Property, Wildlife, Ecosystem and Economy. The project is
	focused on creating a permanent solution for this problem. It
	consists of an integrated IoT based system to detect, monitor
	and solve the issue without any manual involvement. The
	system consists of regular monitoring of the forest area with the
	help of cloud computing and analysis of the root cause of the
	fire. The system uses the latest Microcontroller, Wi-Fi
	communication and precision sensors such that there is no error
	in this part. The system also provides a quick response system so
	the fire can be controlled at the earliest stage.
	the me can be controlled at the carnest stage.
IAM	A Forest fire department
	·
I'm trying to	Frequently monitor fire and make sure to prevent them
•	from getting destroyed .Analyze data from various thermal
	camera's
But	Requires a lot of thermal cameras for monitoring
Because	It's really hard to cover large boundaries and monitor them
Decause	24 hours a day
	24 Hours a day
Which makes me feel	Stressed and agitated about the forests are burning fastly.
